Art Unit: 3748

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 21-27, 35-40, are rejected under 35 U.S.C. 102(b) as being anticipated by GB 1301214 (Wallace et al).

Wallace et al discloses an engine 10 with helical screw rotors 16-17 forming a roots blower, an evaporator 26, 32, and a condenser 30.

Claims 21-27, 35-40, are rejected under 35 U.S.C. 102(b) as being anticipated by US 2003/0172654 (Lawheed).

Lawheed discloses an engine 42 with rotors 100 forming a roots blower, an evaporator 26, and a condenser 46.

Claims 21-27, 35-40, are rejected under 35 U.S.C. 102(b) as being anticipated by DE 3619547 (Koch).

Koch discloses an engine 5 with rotors forming a roots blower, an evaporator, a condenser 13 and a collector 6 forming a separator.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 3748

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 28-34 are rejected under 35 U.S.C. § 103(a) as being unpatentable over DE 3619547 (Lawheed) in view of WO 85/02881 (Lipovetz et al). Lawheed discloses all the claimed subject matter as set forth above in the rejection of claim 21, but does not disclose absorbent step. Lipovetz et al is relied upon to disclose it's well known in a closed cycle system to have an engine 3 with expansion step, then after expansion, a component of the working substance is absorbed using an absorption agent (note page 7, lines 20-30). It would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide an absorption agent in the system of Lawheed as taught by Lipovetz et al for the purpose of achieving appropriate temperature as claimed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Coney et al and Proeschel disclose power plants using roots blowers.
